### Observations

There are about 53 million rides from 2013 to 2018 which sounds a lot but for a city of 8 million people this ridership is relatively low. This is likely due to few factors.

One, seasonal change is very apparent during peak summer seasons while ridership drops during off winter seasons .

Two, the annual growth has happened in year 2016, but has dropped in year 2017.

Lastly, the monthly over last year change happened during the Feb and March 2016. Also, Nov and Dec 2015 have seen huge increases in comparison for the months of 2014.
